

1. Executive Summary:

ResumeFetch is a feature enhancement for existing recruitment platforms designed to simplify the submission process by enabling users to retrieve resumes already uploaded on their LinkedIn profiles through profile URL integration. The feature aims to reduce repetitive manual uploads, improve user convenience, and streamline the job application experience across recruitment platforms.

This document outlines the business requirements, functional expectations, user workflows, and proposed solution for implementing the ResumeFetch feature.

2. Business Problem:

Job applicants frequently upload resumes multiple times across different recruitment platforms, despite already maintaining updated resumes on LinkedIn profiles. This repetitive process consumes time, creates inconsistencies between resume versions, and negatively impacts the overall user experience.

Current recruitment platforms lack a seamless mechanism to reuse resumes already available on professional networking platforms, leading to unnecessary manual effort during job applications.

3. Business Objectives:

- Simplify the resume submission process by letting applicants reuse their existing LinkedIn resume
- Reduce repetitive manual resume uploads across job applications
- Reduce time-to-complete on the application form
- Minimize version inconsistencies between the resume on file and the one on LinkedIn
- Improve profile data accuracy through user verification before saving

4. Scope:

In Scope

- LinkedIn profile URL input
- Resume retrieval
- Resume preview
- Resume download
- Parsed information verification

- Save to Profile functionality
- Manual resume upload fallback

Out of Scope

- Advanced resume editing
- AI resume creation
- Job application tracking
- Resume template customization

5. Stakeholders

Stakeholder	Role
Job Applicants	End users
Product Team	Feature owners
Development Team	Implementation

6. Functional Requirements

ID	Requirement
FR-01	User can paste LinkedIn profile URL into the ResumeFetch feature.
FR-02	System validates the LinkedIn profile URL before processing.
FR-03	System retrieves the uploaded resume associated with the LinkedIn profile.
FR-04	User can preview the retrieved resume within the platform.
FR-05	System displays a success message after successful resume retrieval.
FR-06	User can download the retrieved resume in PDF format.
FR-07	User can save verified resume information to their job portal profile.
FR-08	System displays parsed resume information for user verification.
FR-09	User can review parsed resume information before saving to profile.
FR-10	User must confirm that the retrieved information is accurate and up to date before proceeding.
FR-11	System displays a single error message listing possible causes of retrieval failure — invalid URL, no resume found, or profile visibility settings — and provides both a retry option and a manual upload option.

7. Business Rules

ID	Business Rule
BR-01	Only valid LinkedIn profile URLs are accepted.
BR-02	Resume retrieval is possible only if a resume is associated with the LinkedIn profile.
BR-03	Users must verify that the retrieved information is accurate before saving it to their profile.
BR-04	If retrieval fails for any reason, users can try again or upload a resume manually.

8. Non-Functional Requirements

Category	Requirements
Performance	Resume retrieval within 5 seconds
Security	Validated, publicly accessible LinkedIn URL required for retrieval.
Usability	Responsive layout for desktop web
Availability	Feature should be available 99% of the time during business hours

9. Risks

Risk	Impact
LinkedIn API restriction	Feature limitation
Resume unavailable	User dissatisfaction
Incorrect resume parsing	Inaccurate profile information
Profile visibility settings block access	Retrieval failure, user must upload manually.

10. Assumptions

- Users maintain an updated resume on LinkedIn.
- Internet connectivity is available during resume retrieval.
- Resume retrieval depends on the LinkedIn profile being publicly accessible.
- Users have permission to save retrieved information to their profile.

11. Success Metrics

- Reduced resume upload time
- Increased application completion rate
- Improved user satisfaction
- Reduced repetitive manual uploads
