

Epic	User Story	Priority	Acceptance Criteria
LinkedIn Integration	As a job applicant, I want to paste my LinkedIn profile URL so that my uploaded resume can be retrieved automatically without manual upload.	High	System accepts valid LinkedIn URLs and initiates resume retrieval successfully.
Resume Retrieval	As a user, I want the platform to retrieve my uploaded LinkedIn resume so that I can avoid uploading the same resume repeatedly across job portals.	High	System successfully retrieves the resume associated with the LinkedIn profile.
Resume Preview	As a user, I want to preview the retrieved resume before downloading so that I can verify the correct document has been fetched.	High	Resume preview loads successfully with readable formatting.
Error Handling	As a user, I want to see the possible reasons my resume retrieval failed — including an invalid URL, no resume on the profile, or profile visibility settings — so that I know what to check before trying again.	Medium	- Error screen displays a single message listing all possible causes: the LinkedIn URL is incorrect, no resume is uploaded to the profile, or profile visibility settings are blocking access. - User can choose to try again or upload a resume manually from this same screen.
Information Verification	As a user, I want to verify the retrieved resume information before proceeding so that I can confirm it is accurate and up to date.	High	Retrieved resume information is displayed for verification, and user confirmation is required before proceeding.
Resume Download	As a user, I want the option to download the retrieved resume instantly so that I can reuse it for multiple applications.	High	User can download the retrieved resume in PDF format after successful retrieval.
Save to Profile	As a user, I want to save verified resume information to my job portal profile so that I do not need to enter the same information repeatedly.	High	Verified resume information is successfully saved to the user's job portal profile.
